Amada Promecam Hydraulic Press Brake Control troubleshooting
The Amada press brake safety illustrations below are a good visual guideline for the safe operation of Promecam Machines Use pliers or any other tooling to help bend small dimension or small width parts. Never place your fingers near the punches. Remove your hands form the part to be bent after the latter has been pinched between the tools.

3.1 – AMADA PROCAM PRESS BRAKE ELECTRICAL CONNECTION The proper operation of an electrical system depends on the quality of the power supply, it should be stable and free of disturbances. Your Amada Promecam Installation should be planned and carried out so as to meet current applicable regulations. 3.1.1 – GENERAL MAINS CHARACTERISTICS

AMADA PROMECAM PRESS BRAKE INSTALLATION REQUIREMENTS
The unqualified success of the AMADA PROMECAM CNC press brake back gauge is due to the compatibility of design between the mb logic controller and the mechanical components of the system. The mechanical components consist of :

For downstroking Press brakes, AMADA PROMECAM has retained the principle of constant parallelism, by using a composite beam, which has been patented in 20 countries. The mastery of deflection is of greater consequence to precision bending, as without it, electronic and hydraulic monitoring on press brakes cannot be claimed as being effective.

The Operateur, a total control The Operateur is a CNC control that was totally developed by Amada - Promecam. It controls all aspects of the HFB press brake yet it is simple to use and it is aesthetically and ergonomically designed. This control includes an integrated maintenance program that can be accessed from the PC through a DNC cable.

Press brake—AMADA
The production and sale of press brakes began in 1955 through Promecam in France. In 1986, Promecam was bought by the AMADA Group and the brand was strengthened using AMADA's knowledge and experience.

AMADA's Fixed Height (AFH) Tooling for the HRB Series is an optimum solution to decrease setup times and increase flexibility. AFH Tooling features a consistent 120mm Punch height that eliminates frequent laser safety device adjustments and allows for safe stage bending across the length of the press brake.
