Cell & Molecular Biology | BIOLOGY

Cell and Molecular Biology studies the structure and function of the cell, which is the basic unit of life. Cell biology is concerned with the physiological properties, metabolic processes, signaling pathways, life cycle, chemical composition and interactions of the cell with their environment. This is done both on a microscopic and molecular level as it encompasses prokaryotic cells and eukaryotic cells.

Molecular and Cell Biology

Cell and Molecular Biology is the study of what cells are, how they are put together, what makes them work, what makes them differ from each other, how they associate and interact, what goes wrong in disease states, and, ultimately, how to intervene in these processes in some beneficial way to correct disease states.

Bachelor of Science in Biology: Concentration in Cell and ...

Molecular cell biology is a branch of biology which is a relatively new field compared to other fields of study. Scientists who study this field study the structure and properties of molecules found within cells. This field is often closely linked with biochemistry, in which the chemical reactions of biological molecules are looked at.

What is Molecular Cell Biology? (with pictures)

Cell and molecular biology (CMB) is for students with a passion for the life sciences and research who want to prepare for employment in their field or for graduate/professional training. CMB is focused on determining how cells develop and function and the significance of those functions in the living organism.
