Mr. Babb, a descendant of resolute venturesome pioneer stock, entered upon an eventful boyhood in the untamed wilds of the western border of Texas in a locality and period when the mounted Indian marauder with his panoply of war and death was often seen silhouetted against the distant horizon, at a time when the spectre of tragedy and desolation, of atrocious massacre, mutilation, captivity, and torture, cast its terrifying shadow athwart the fireside of every pioneer home; when, unheralded, cunning monsters of vindictive savage hate, here and there among the settlers, in unguarded repose or fancied security, sprang from stealthy ambush, from the wood-land's dark border, the sheltering hillside and gulch, or the shadowy lustre of an unwelcome fateful full moon, amid and unheeding the shrieks of horror and frenzied slaughter, mingled with the cries of anguish and prayers of women and children kneeling before their doom, they struck with the fangs of the most vicious, merciless, and unreasoning beast, and in their unrestrained and unresisted madness and ferocity, they left in the crimson wake a sickening chapter of ghastrly human wreckage of whole families exterminated, in either a fiendish butchery or revolting captivity without a counter part in all the annals of every race and age since the hour of the dawn of Christendom, if not since the world began.

This companion work to John Warfield's A Science of Generic Design: Managing Complexity Through Systems Design goes beyond theory to present actual working models for practitioners to follow in the search for solutions to complex systems problems. It addresses the use of the computer to aid decision-making and includes case studies of actual practical applications. Systems design skills will be an integral part of general education in the near future. A Handbook of Interactive Management provides techniques for problem solving, emphasizing the skills necessary to integrate knowledge from diverse disciplines and to implement the resulting solutions. Managers and administrators of complex sociotechnical systems will welcome this guide to translating the principles of generic design into effective action.

Recounts the author's experiences with the reclusive Tarahumara Indians, whose techniques allow them to run long distances with ease, and describes his training for a fifty-mile race with the tribe and a number of ultramarathoners.

Van Sickle and Rodewald look at the fur trades cultural impact and demonstrate the great extent to which white adventurers, explorers and traders heavily relied upon the Native American tribes and emphasize the overriding role of Indian people in exploration, wilderness transportation, survival, and the collection of pelts and hides. They focus their work around the year 1833.
