Chemical equilibrium is a dynamic concept that challenges students to think about chemical reactions in a new way. Most chemical reactions do not proceed in one direction or give 100% yields of products; many are reversible, and both reactants and products are present at equilibrium. ~~Classifying Chemical Reactions—50 Webs~~

Summary. In this inquiry-based experiment, the students design and carry out a sequence of chemical reactions for the separation and identification of iron, silver, and zinc ions in water. Two parallel series of tests will be carried out, one using a known sample containing all three metal cations and the other using unknown samples containing one, two, or all three cations.
