As such, the book collates 3 subspecialties—hematology, immunology, and infectious diseases—into a single network. The book is organized by specialty: the first 6 chapters relate to hematologic development and defenses, the next 6 to immunologic protection, and the following 4 to infectious challenges.

Infectious diseases represent an increasingly important cause of human morbidity and mortality throughout the world. Vaccine development is thus of great importance in terms of global health. In parallel with this growth, there has been a dramatic increase in studies to identify the innate, humoral or cellular immunological mechanisms which confer immunity to pathogenic viruses, bacteria ...

This exciting new reference brings you information about the most controversial hematology, immunology, and infectious disease challenges you face in your practice. The book confidently tackles these subjects and gives seasoned advice on the latest diagnostic and treatment strategies using evidence-based medicine wherever possible. It gives you the latest information you need to keep pace with the fast-paced, dynamic environment of neonatology. Addresses controversial topics head on, so you can decide how to handle these difficult practice issues. Serves as the bridge between the latest cutting-edge research and its application to clinical practice. Assembles a world-class group of neonatologists, representing the true leaders of the specialty, to ensure the most authoritative content available.

Dr. Richard Polin's Neonatology Questions and Controversies series highlights the most challenging aspects of neonatal care, offering trustworthy guidance on up-to-date diagnostic and treatment options in the field. In each volume, renowned experts address the clinical problems of greatest concern to today's practitioners, helping you handle difficult practice issues and provide optimal, evidence-based care to every patient.

The structure, functions, and interactions of myeloid cells have long been the focus of research and therapeutics development. Yet, much more remains to be discovered about the complex web of relationships that makes up the immune systems of animals. Scientists today are applying genome-wide analyses, single-cell methods, gene editing, and modern imaging techniques to reveal new subclasses of differentiated myeloid cells, new receptors and cytokines, and important interactions among immune cells. In *Myeloid Cells in Health and Disease: A Synthesis*, Editor Siamon Gordon has assembled an international team of esteemed scientists to provide their perspectives of myeloid cells during innate and adaptive immunity. The book begins by presenting the foundational research of Paul Ehrlich, Elie Metchnikoff, and Donald Metcalf. The following chapters discuss evolution and the life cycles of myeloid cells; specific types of differentiated myeloid cells, including macrophage differentiation; and antigen processing and presentation. The rest of the book is organized by broad topics in immunology, including the recruitment of myeloid and other immune cells following microbial infection the role of myeloid cells in the inflammation process and the repair of damaged tissue the vast arsenal of myeloid cell secretory molecules, including metalloproteinases, tumor necrosis factor, histamine, and perforin receptors and downstream signaling pathways that are activated following ligand-receptor

binding roles of myeloid cells during microbial and parasite infections contributions of myeloid cells in atherosclerosis myeloid-derived suppressor cells in tumor development and cancer Myeloid Cells in Health and Disease: A Synthesis will benefit graduate students and researchers in immunology, hematology, microbial pathogenesis, infectious disease, pathology, and pharmacology. Established scientists and physicians in these and related fields will enjoy the book's rich history of myeloid cell research and suggestions for future research directions and potential therapies.

Neonatology: Questions and Controversies gives you expert opinions about the hottest topics facing you in clinical practice. Titles in this package cover neurology, cardiovascular, nephrology, pulmonary, gastroenterology and nutrition, and hematology, immunology and infectious diseases.

This pocket-sized book is designed to enable busy doctors to revise on the run. Each book in the series contains 100 exam-based MCQs, covering essential topics for MRCP Part 1. The questions are written by experienced subject specialists and emphasize the basic sciences. Answers and teaching notes for every question are printed on the reverse of each page for quick self-assessment. The books also include revision checklists and individual subject indices, giving the user easy access to specific topics. Second edition books have been given new colour-coded covers.
