What one really needs to know to become an effective negotiator, clearly and succinctly written for the layperson and businessperson. The Essential A – Z Guides are lively, practical resources for business and investment professionals, as well as politicians, public servants, and students. Each book contains hundreds of entries that concisely explain the subject ' s concept in a handy reference that complements any business library. The complete series includes these four titles: Essential Economics Essential Investment Essential Negotiation Essentials for Board Directors

High-stakes public examinations exert a dominant influence in most education systems. They affect both teacher and student behavior, especially at the middle and upper levels of secondary education. The content of past examinations tends to dictate what is taught and how it is taught and, more important, what is learned and how it is learned. By changing aspects of these examinations, especially their content and format, education systems can have a strong positive impact on teacher behavior and student learning, help raise student achievement levels, and better prepare students for tertiary-level education and for employment. Examination agencies, many of which have followed the same procedures over decades, can learn from the successes and failures of other systems. This book addresses current issues related to the development, administration, scoring, and usage of these high-stakes public examinations, identifying key issues and problems related to examinations in many emerging market economies as well as in advanced economies. The book ' s primary audience consists of public examination officials on national, regional, and state examination boards, but the book should also be of interest to senior education policy makers concerned with certification and learning achievement standards, to academics and researchers interested in educational assessment, to governmental and education agencies responsible for student selection, and to professionals at development organizations. " This extremely well-written and comprehensive book offers a timely review of the diversity of public examination practices worldwide, of the tensions between examinations and learning, and of the technical expertise involved in the creation of valid, reliable, and fair assessments. It reminds us that as " the diploma disease " ? takes hold with an ever-greater intensity at every stage of education worldwide, and the commercial business of testing flourishes, those concerned with educational quality and meaningful learning must be on guard to prevent the assessment tail wagging the educational dog. " ? Angela W. Little, Professor Emerita, Institute of Education, University College London " This book is very well structured and written and draws on the authors ' remarkable global knowledge across countries and histories. It will be a great asset both to administrators responsible for examinations and to academics and other professionals who seek to understand the nature and impact of examinations of different types and in different settings. " ? Mark Bray, UNESCO Chair Professor of Comparative Education, University of Hong Kong; and former Director, UNESCO International Institute for Educational Planning " I am sure that Public Examinations Examined, which thoroughly analyzes the practice of public examinations in different countries and makes profound and well-grounded conclusions, will arouse very great interest and will serve to further improve public examinations. " ? Victor Bolotov, Distinguished Professor, Higher School of Economics, National Research University, Moscow; member, Russian Academy of Education; and former Deputy Minister of Education, Russian Federation

This class-tested undergraduate textbook covers the entire syllabus for Exam C of the Society of Actuaries (SOA).

Flexible graduate textbook that introduces the applications, theory, and algorithms of linear and nonlinear optimization in a clear succinct style, supported by numerous examples and exercises. It introduces important realistic applications and explains how optimization can address them.

With a foreword written by Professor Ludwig Narzís—one of the world ' s most notable brewing scientists—the Handbook of Brewing, Third Edition, as it has for two previous editions, provides the essential information for those who are involved or interested in the brewing industry. The book simultaneously introduces the basics—such as the biochemistry and microbiology of brewing processes—and also deals with the necessities associated with a brewery, which are steadily increasing due to legislation, energy priorities, environmental issues, and the pressures to reduce costs. Written by an international team of experts recognized for their contributions to brewing science and technology, it also explains how massive improvements in computer power and automation have modernized the brewhouse, while developments in biotechnology have steadily improved brewing efficiency, beer quality, and shelf life.

Whisky and Other Spirits: Technology, Production and Marketing, Third Edition continues to provide details from raw materials to the finished product, including production, packaging and marketing. It focuses on the science and technology of the process as well as the environment in which it is produced. Today, environmental concerns and sustainability of products has taken on a new level of importance. Traditional ways of packaging and marketing have also changed dramatically in recent years as the technology of packaging has moved from a staid bottle industry to spirit products that cross traditional beverage categories and packaging. This new edition provides the latest changes in industry and the beverages market. All chapters are updated, with new chapters added to help improve research and development, and to increase production of not only whiskey but other spirits such as gin and rum and white spirits. This new edition also discusses trendy reduced alcohol and no alcohol products. Presents a detailed look into current global situation for whisky and spirits production Highlights craft distilling and the challenges craft distillers face by presenting the art of spirit production in clear detail Presents insights into how marketing has changed for distilled products, with an emphasis on new mobile technologies

The field of professional, academic and vocational qualifications is ever-changing. The new edition of this practical guide provides thorough information on all developments in these areas in the UK. Fully indexed, it includes details on all university awards and over 200 career fields, their professional and accrediting bodies, levels of membership and qualifications. British Qualifications is a unique resource for human resource managers and university admissions officers to verify the qualifications of potential employees and students.

New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences". The brand's mission is no different today - for its consumers, New Scientist reports, explores and interprets the results of human endeavour set in the context of society and culture.

Negotiation is a vital skill for every manager. As a result, there are almost as many 'patented' techniques for negotiation as there are managers, each proclaiming to be the definitive route to success. The authors behind these techniques keep their work very much to themselves. Their fundamentally different approaches to negotiation remain in isolation from each other, as if their authors were too polite to contradict others in the field. In most cases, when you are developing your negotiation skills, this leaves you with a stark choice: pick a single technique and ignore the rest. Until now ... Kennedy on Negotiation is an authoritative and comprehensive guide to negotiation skills training and practice. Dr Kennedy uses the well-established 'Four Phases' model as the structure around which he critiques constructively the numerous competing theories and models. Gavin Kennedy's book is everything you would expect from one of the most respected writers on negotiation. It is a readable and reliable guide to all that is best in the various contributions to negotiation training from authors such as John Nash, Walton and McKersie, Atkinson, Nierenberg, Rubin and Brown, Gottschalk, Karass, Fisher and Ury, and many more, including Gavin Kennedy himself.
