Welcome to my page of solutions to "Introduction to Algorithms" by Cormen, Leiserson, Rivest, and Stein. It was typeset using the LaTeX language, with most diagrams done using Tikz. It is nearly complete (and over 500 pages total!!), there were a few problems that proved some combination of more difficult and less interesting on the initial pass, so they are not yet completed.

1:2-2 Insertion sort beats merge sort when $8n^2 < 64n \lg n$, $n < 8 \lg n$, $2n = 8 < n$. This is true for $2 \leq n \leq 43$ (found by using a calculator). Rewrite merge sort to use insertion sort for input of size 43 or less in order to improve the running time. 1-1 We assume that all months are 30 days and all years are 365.

1st Solution: Update the data structure to point to the new node which contains satellite data of 'y'. 2nd Solution: Place 'y' into z's position after deleting z: make right ('y') the child of parent ('y'); connect 'y' to z's children and parent. 12.3.5. Example: in fig. 12.4 from the cormen book itself.
