## Introduction To Conic Sections Practice A

A conic section (or simply conic) is a curve obtained as the intersection of the surface of a cone with a plane; the three types are parabolas, ellipses, and hyperbolas. A conic section can be graphed on a coordinate plane. Every conic section has certain features, including at least one focus and directrix.

So first of all, what are they and why are they called conic sections? Actually, you probably recognize a few of them already, and I'll write them out. They're the circle, the ellipse, the parabola, and the hyperbola. That's a p. Hyperbola. And you know what these are already. When I first learned conic sections, I was like, oh, I know what a ...

sections, we can derive the equation of a circle by using coordinates and the distance formula. The equation of a circle is  $(x - h)^2 + (y - k)^2 = r^2$  where  $r$  is equal to the radius, and the coordinates  $(x, y)$  are equal to the circle center. The variables  $h$  and  $k$  represent horizontal or vertical shifts in the circle graph.
