This assembly of lectures should appeal to anyone with an interest in the history of science and the nature of living things. Seven of the eight lectures are by eminent biochemists and describe the development of their own subject 'from the inside; the eighth is a more general one.

In medieval and early modern Europe, the practice of alchemy promised extraordinary physical transformations. Who would not be amazed to see base metals turned into silver and gold, hard iron into soft water, and deadly poison into elixirs that could heal the human body? To defend such claims, alchemists turned to the past, scouring ancient books for evidence of a lost alchemical heritage and seeking to translate their secret language and obscure imagery into replicable, practical effects. Tracing the development of alchemy in England over four hundred years, from the beginning of the fourteenth century to the end of the seventeenth, Jennifer M. Rampling illuminates the role of alchemical reading and experimental practice in the broader context of national and scientific history. Using new manuscript sources, she shows how practitioners like George Ripley, John Dee, and Edward Kelley, as well as many previously unknown alchemists, devised new practical approaches to alchemy while seeking the support of English monarchs. By reconstructing their alchemical ideas, practices, and disputes, Rampling reveals how English alchemy was continually reinvented over the space of four centuries, resulting in changes to the science itself. In so doing, *The Experimental Fire* bridges the intellectual history of chemistry and the wider worlds of early modern patronage, medicine, and science.

The fifth volume of Dr Needham's immense undertaking, like the fourth, is subdivided into parts for ease of assimilation and presentation, each part bound and published separately. The volume as a whole covers the subjects of alchemy, early chemistry, and chemical technology (which includes military invention, especially gunpowder and rockets; paper and printing; textiles; mining and metallurgy; the salt industry; and ceramics).

The fifth volume of Dr Needham's immense undertaking, like the fourth, is subdivided into parts for ease of assimilation and presentation, each part bound and published separately. The volume as a whole covers the subjects of alchemy, early chemistry, and chemical technology (which includes military invention, especially gunpowder and rockets; paper and printing; textiles; mining and metallurgy; the salt industry; and ceramics).

From alchemy to industry, a synthetic history of chemistry through the ages.

Illustrated record of major interests of Paracelsus and other 16th-century chemical philosophers covers chemistry and nature in the Renaissance, Paracelsian debates, theories of Fludd, and other fascinating aspects of the era.

An illustrated survey & history of alchemy & alchemists both past and present including the rich contributions from the Orient and the contributions on the path to modern medicine.

Explores attitudes towards longevity and death in Islamic, Chinese, and Western civilizations, covering such topics as medicine, public health, personal hygiene, and aging.
