This book takes
a look at fully
automated,
autonomous
vehicles and

discusses many open questions:
How can autonomous vehicles be integrated into the current transportation system with diverse users and human drivers? Where do automated vehicles fall

risks are
associated with
automation and
how will society
respond to these
risks? How will
the marketplace

what changes may

companies?

Experts from
Germany and the
United States
define key
societal,
engineering, and
mobility issues
related to the
automation of
vehicles. They
discuss the
decisions

programmers of

The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving. While the safety benefits of such vehicles are

requires similar
