This popular book incorporates modern approaches to physics. It not only tells readers how physics works, it shows them. Applications have been enhanced to form a bridge between concepts and reasoning.

This third edition of the famous introductory physics text has been thoroughly revised and updated. The new edition contains two entirely new chapters: “Relativity” as the concluding chapter of the regular version, and “Particles and the Cosmos” as the concluding chapter of the extended version. New also are 16 essays, distributed throughout the text, on applications of physics to “real world” topics of student interest. Each essay is self-contained and is written by an expert in the topic. The body of the text contains more help in problem-solving and the chapter sections are shorter, making the material more accessible. There are more photos and diagrams than before, including attention-getting chapter-head photos and captions. The number of worked examples has been increased, as has the number of questions, exercises, and problems. In addition, a thread of ideas from relativistic and quantum physics is weaved through the earlier chapters, preparing the way for the later chapters.

Access to WileyPLUS is not included with this textbook. The 10th edition of Halliday, Resnick and Walker’s Fundamentals of Physics provides the perfect solution for teaching a 2 or 3 semester calc-based physics course, providing instructors with a tool by which they can teach students how to effectively read scientific material, identify fundamental concepts, reason through scientific questions, and solve quantitative problems. The 10th edition builds upon previous editions by offering new features designed to better engage students and support critical thinking. These include NEW Video Illustrations that bring the subject matter to life, NEW Vector Drawing Questions that test students’ conceptual understanding, and additional multimedia resources (videos and animations) that provide an alternative pathway through the material for those who struggle with reading scientific exposition.
