Hydrating solutions: After harvest, hydrating solutions are used to facilitate water uptake and restore the turgor of wilted flowers. Hydrating solutions are usually warm water (110F) with a biocide (such as slow release chlorine tablets), acidified to pH 3.5 to 5.0 with citric acid and include a wetting agent.

~~Harvesting and Handling Cut Flowers~~

In agriculture, postharvest handling is the stage of crop production immediately following harvest, including cooling, cleaning, sorting and packing. The instant a crop is removed from the ground, or separated from its parent plant, it begins to deteriorate. Postharvest treatment largely determines final quality, whether a crop is sold for fresh consumption, or used as an ingredient in a processed food product.
