Turbomachinery, in mechanical engineering, describes machines that transfer energy between a rotor and a fluid, including both turbines and compressors.While a turbine transfers energy from a fluid to a rotor, a compressor transfers energy from a rotor to a fluid. These two types of machines are governed by the same basic relationships including Newton's second Law of Motion and Euler's pump ...

Turbomachinery – Wikipedia

Dimensional analysis applied to turbo machines has two uses—namely, prediction of a prototype's performance from the tests conducted on a scale model (similitude) and the determination of the most suitable type of machine on the basis of maximum efficiency, for a specified range of head, speed, and flow rate. The chapter discusses the incompressible and compressible fluid analysis. In case ...
